

SOLICK

COUNT

Nm 54.000

COMPOSITION

- COTTON 53%
- ACETATE 47%

GAUGE

- 16G-2P

TYPE OF YARN

- STRAIGHT

COLOR STOCKS

- ALL COLOR STOCK SERVICE
- OWN COLOR MINIMUM:5KG

DESCRIPTION

SOLICK is combined with acetate and cotton. The fiber material of “acetate” is the combination of acetic acid with cellulose. Acetate is semi-synthetic fiber which made with spun filaments of cellulose taken from wood pulp. The type of acetate of this quality is bright diacetate which has beautiful luster like silk and it is free from clinging. The fiber of acetate is made finer compared to ordinary one and the yarn is finished with more than twice the number of fibers as usual. The texture becomes more supple and the appearance of the garment is very beautiful.
