

# SPUGNA MOLE

## COUNT

Nm 1.900

## COMPOSITION

- WOOL 86%
- POLYESTER 14%

## GAUGE

- 3G-1P

## TYPE OF YARN

- CHENILLE YARN

## COLOR STOCKS

- ★ AVAILABLE STOCK
- OWN COLOR MINIMUM:3KG

## DESCRIPTION

SPUGNA is made from 22 micron non-mulesing wool by a grazing species of French Merino produced in small quantities. The sheep graze in the wilderness of Arles in South of France where the temperature is colder, and the altitude is 1500-3000m. It has excellent bulkiness compared to conventional merino wool. It is light and heat-retaining due to the structure of the crimp. SPUGNA MOLE is a chenille yarn made from the yarn of French merino wool. The fur-like chenille has excellent bulkiness with amazingly lightness.

### 【TECHNICAL RECOMMENDATION】

The yarn can get fur-like texture by the washing it. The point of the washing process is to dehydrate the knitted fabric extremely shortly before tumbler drying. The moisture remaining in the knitted fabric, gives the yarn a fluffy feeling that shrinks moderately. If the shrinkage and bulging are not enough, it can be improved by adjusting the dehydration time to let more water remain in the knitted fabric. (The French wool does not easily shrink, so the knitted fabric won't be fluffy and soft if it is completely dehydrated before tumbler drying.)

### 【CONTAMINATION NOTICE】

The French wool used in this item is a valuable raw material and is specially processed for knitting yarn. Due to the nature of the yarn, some fragments of plant and seeds may remain in the material in a bar

form.

It is necessary to test knit before proceeding to production. Our product standard will be based on this sampling. Please understand that the contaminated product is not faulty. We cannot be responsible for any procedures after knitting to remove the contaminants. \*The contamination is more visible on stronger colors. We are open to any requests regarding ways to reduce this contaminant.
